⌵ ...

You don't need \$50K and 3 months to launch your MVP.

This \$100 tech stack lets you ship any idea in 2 weeks:

[@lovable\\_dev](#) – front-end, most of back-end

[@cursor\\_ai](#) – clean up back-end & integrations

[@supabase](#) – easy & scalable backend

[@vercel](#) – fast, global hosting

[@stripe](#) – payments, handled

✖ The old playbook:

- Raise a round

- Hire a full team

- Spend 6 months building

- Hope users show up

✔ The new playbook:

- Ship fast

- Talk to users

- Iterate on real feedback

- Raise once there's traction

I've seen founders burn through \$200K building stuff no one wants.

Meanwhile, the smartest ones I know?

← Post

they're shipping their idea early – and testing the market real-time way.

Perfect code isn't the edge. Speed is.

Stop over-engineering. Start shipping.

Amazing! Here's my tech stack:

@boltddotnew (UI)

@augmentcode (Backend)

@cursor\_ai (Model specific capabilities)

@supabase

@vercel (frontend) & @render (backend)

@stripe

and fullstackroadmap.com (my own product for AI agent documentation generation 😊)

Full Stack Roadmap - Transform your ideas into full-stack apps with AI-power...
